## **Primer on Greenhouse Gases** Donald J. Wuebbles, Jae Edmonds

Primer on Greenhouse Gases provides an excellent reference resource that brings together the most current information available on greenhouse gases. Each of the gases featured is recognized as important to the future state of global atmospheric chemistry and climate. The direct radiative importance of each gas to climate, its role as a radiative precursor, and how it functions as an intermediate constituent because of its chemical activities are provided. Knowns, unknowns, and uncertainties for each gas are described. This new book reveals information critical to developing an understanding of the role of energy and atmospheric chemical and radiative processes in determining atmospheric concentrations of greenhouse gases.
