**Vertically Transmitted Diseases: Models and Dynamics (Biomathematics)** Stavros Busenberg, Kenneth Cooke

Infectious diseases are transmitted through various different mechanisms including person to person interactions, by insect vectors and via vertical transmission from a parent to an unborn offspring. The population dynamics of such disease transmission can be very complicated and the development of rational strategies for controlling and preventing the spread of these diseases requires careful modeling and analysis. The book describes current methods for formulating models and analyzing the dynamics of the propagation of diseases which include vertical transmission as one of the mechanisms for their spread. Generic models that describe broad classes of diseases as well as models that are tailored to the dynamics of a specific infection are formulated and analyzed. The effects of incubation periods, maturation delays, and age-structure, interactions between disease transmission and demographic changes, population crowding, spatial spread, chaotic dynamic behavior, seasonal periodicities and discrete time interval events are studied within the context of specific disease transmission models. No previous background in disease transmission modeling and analysis is assumed and the required biological concepts and mathematical methods are gradually introduced within the context of specific disease transmission models. Graphs are widely used to illustrate and explain the modeling assumptions and results. REMARKS: NOTE: the authors have supplied variants on the promotion text that are more suitable for promotion in different fields (by virtue of different emphasis in the content). They are not enclosed, but in the mathematics editorial.

### **From reader reviews:**

#### **Christina Mundell:**

The book Vertically Transmitted Diseases: Models and Dynamics (Biomathematics) gives you the sense of being enjoy for your spare time. You can use to make your capable more increase. Book can to be your best friend when you getting anxiety or having big problem together with your subject. If you can make reading through a book Vertically Transmitted Diseases: Models and Dynamics (Biomathematics) for being your habit, you can get more advantages, like add your capable, increase your knowledge about some or all subjects. You may know everything if you like open and read a reserve Vertically Transmitted Diseases: Models and Dynamics (Biomathematics). Kinds of book are a lot of. It means that, science book or encyclopedia or other folks. So , how do you think about this book?

#### **Susan Ford:**

What do you regarding book? It is not important to you? Or just adding material when you really need something to explain what the one you have problem? How about your free time? Or are you busy man? If you don't have spare time to perform others business, it is make one feel bored faster. And you have time? What did you do? Every individual has many questions above. They need to answer that question since just their can do this. It said that about publication. Book is familiar in each person. Yes, it is proper. Because start from on jardín de infancia until university need this Vertically Transmitted Diseases: Models and Dynamics (Biomathematics) to read.

#### **Joyce Cannon:**

Reading a book being new life style in this calendar year; every people loves to read a book. When you go through a book you can get a large amount of benefit. When you read publications, you can improve your knowledge, due to the fact book has a lot of information onto it. The information that you will get depend on what kinds of book that you have read. If you would like get information about your review, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these kinds of us novel, comics, as well as soon. The Vertically Transmitted Diseases: Models and Dynamics (Biomathematics) provide you with new experience in examining a book.

#### **Mary Perez:**

As a college student exactly feel bored to reading. If their teacher questioned them to go to the library as well as to make summary for some book, they are complained. Just little students that has reading's heart or real their leisure activity. They just do what the teacher want, like asked to the library. They go to there but nothing reading seriously. Any students feel that reading is not important, boring as well as can't see colorful images on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. So , this Vertically Transmitted Diseases: Models and Dynamics (Biomathematics) can make you really feel more

interested to read.
