Statistical Analysis of Network Data: Methods and Models (Springer Series in Statistics)

Eric D. Kolaczyk

Statistical Analysis of Network Data: Methods and Models (Springer Series in Statistics) Eric D. Kolaczyk

In recent years there has been an explosion of network data – that is, measurements that are either of or from a system conceptualized as a network – from seemingly all corners of science. The combination of an increasingly pervasive interest in scientific analysis at a systems level and the ever-growing capabilities for high-throughput data collection in various fields has fueled this trend. Researchers from biology and bioinformatics to physics, from computer science to the information sciences, and from economics to sociology are more and more engaged in the collection and statistical analysis of data from a network-centric perspective. Accordingly, the contributions to statistical methods and modeling in this area have come from a similarly broad spectrum of areas, often independently of each other. Many books already have been written addressing network data and network problems in specific individual disciplines. However, there is at present no single book that provides a modern treatment of a core body of knowledge for statistical analysis of network data that cuts across the various disciplines and is organized rather according to a statistical taxonomy of tasks and techniques. This book seeks to fill that gap and, as such, it aims to contribute to a growing trend in recent years to facilitate the exchange of knowledge across the pre-existing boundaries between those disciplines that play a role in what is coming to be called ‘network science.’

From reader reviews:

Jesse Fox:

Information is provisions for people to get better life, information these days can get by anyone on everywhere. The information can be a understanding or any news even a problem. What people must be consider if those information which is in the former life are difficult to be find than now is taking seriously which one works to believe or which one the resource are convinced. If you have the unstable resource then you have it as your main information you will see huge disadvantage for you. All of those possibilities will not happen with you if you take Statistical Analysis of Network Data: Methods and Models (Springer Series in Statistics) as the daily resource information.

Daniel Watkins:

The book Statistical Analysis of Network Data: Methods and Models (Springer Series in Statistics) will bring that you the new experience of reading any book. The author style to explain the idea is very unique. In case you try to find new book you just read, this book very acceptable to you. The book Statistical Analysis of Network Data: Methods and Models (Springer Series in Statistics) is much recommended to you to read. You can also get the e-book from the official web site, so you can quicker to read the book.

Hoyt Moore:

Playing with family within a park, coming to see the sea world or hanging out with good friends is thing that usually you may have done when you have spare time, in that case why you don't try matter that really opposite from that. Just one activity that make you not experience tired but still relaxing, trilling like on roller coaster you already been ride on and with addition info. Even you love Statistical Analysis of Network Data: Methods and Models (Springer Series in Statistics), you can enjoy both. It is fine combination right, you still would like to miss it? What kind of hang-out type is it? Oh occur its mind hangout people. What? Still don't buy it, oh come on its referred to as reading friends.

Calvin Copher:

Is it you who having spare time after that spend it whole day by means of watching television programs or just resting on the bed? Do you need something new? This Statistical Analysis of Network Data: Methods and Models (Springer Series in Statistics) can be the answer, oh how comes? A fresh book you know. You are therefore out of date, spending your spare time by reading in this brand new era is common not a geek activity. So what these textbooks have than the others?
