Non-Archimedean Operator Theory (SpringerBriefs in Mathematics)

Toka Diagana, François Ramaroson

Non-Archimedean Operator Theory (SpringerBriefs in Mathematics)

Toka Diagana, François Ramaroson

Non-Archimedean Operator Theory (SpringerBriefs in Mathematics) Toka Diagana, François Ramaroson

This book focuses on the theory of linear operators on non-Archimedean Banach spaces. The topics treated in this book range from a basic introduction to non-Archimedean valued fields, free non-Archimedean Banach spaces, bounded and unbounded linear operators in the non-Archimedean setting, to the spectral theory for some classes of linear operators. The theory of Fredholm operators is emphasized and used as an important tool in the study of the spectral theory of non-Archimedean operators. Explicit descriptions of the spectra of some operators are worked out. Moreover, detailed background materials on non-Archimedean valued fields and free non-Archimedean Banach spaces are included for completeness and for reference.

The readership of the book is aimed toward graduate and postgraduate students, mathematicians, and non-mathematicians such as physicists and engineers who are interested in non-Archimedean functional analysis. Further, it can be used as an introduction to the study of non-Archimedean operator theory in general and to the study of spectral theory in other special cases.

From reader reviews:

Inge Reader:

Have you spare time for a day? What do you do when you have more or little spare time? Yep, you can choose the suitable activity for spend your time. Any person spent their particular spare time to take a wander, shopping, or went to the actual Mall. How about open or read a book titled Non-Archimedean Operator Theory (SpringerBriefs in Mathematics)? Maybe it is being best activity for you. You recognize beside you can spend your time together with your favorite's book, you can more intelligent than before. Do you agree with it is opinion or you have some other opinion?

Ronald Jackson:

In this 21st centuries, people become competitive in every single way. By being competitive right now, people have do something to make these individuals survives, being in the middle of the actual crowded place and notice through surrounding. One thing that sometimes many people have underestimated this for a while is reading. Sure, by reading a publication your ability to survive raise then having chance to endure than other is high. For you personally who want to start reading a book, we give you this kind of Non-Archimedean Operator Theory (SpringerBriefs in Mathematics) book as beginner and daily reading publication. Why, because this book is usually more than just a book.

Eliza Gold:

The book with title Non-Archimedean Operator Theory (SpringerBriefs in Mathematics) posesses a lot of information that you can discover it. You can get a lot of benefit after read this book. This specific book exist new know-how the information that exist in this reserve represented the condition of the world currently. That is important to yo7u to know how the improvement of the world. This book will bring you with new era of the globalization. You can read the e-book on your own smart phone, so you can read the idea anywhere you want.

Susan Munoz:

As a student exactly feel bored to reading. If their teacher expected them to go to the library or to make summary for some reserve, they are complained. Just very little students that has reading's soul or real their pastime. They just do what the professor want, like asked to the library. They go to presently there but nothing reading seriously. Any students feel that reading through is not important, boring and can't see colorful photographs on there. Yeah, it is to become complicated. Book is very important for you personally. As we know that on this age, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore , this Non-Archimedean Operator Theory (SpringerBriefs in Mathematics) can make you experience more interested to read.
