Emerging Illnesses and Society: Negotiating the Public Health Agenda

Emerging Illnesses and Society: Negotiating the Public Health Agenda

How do new diseases become part of the public health agenda? *Emerging Illnesses and Society* brings together historians, sociologists, epidemiologists, public health experts, and others to explore this vital issue. Contributors describe the processes by which patients' groups interact with medical researchers, public health institutions, and the media to identify and address previously unknown illnesses, including multiple sclerosis, Tourette syndrome, AIDS, lead poisoning, Lyme disease, and hepatitis C. The introductory chapter develops a general theoretical model of the social process of "emerging" illness, identifying critical epidemiologic, social and political factors that shape different trajectories toward the construction of public health priorities. Through case studies of individual diseases and analyses of public awareness campaigns and institutional responses, this timely volume provides important insights into the medical, social, and economic factors that determine why some illnesses receive more attention and funding than others.

Contributors: Deborah Barrett, University of North Carolina, Chapel Hill; Steven Epstein, University of California, San Diego; Phyllis Freeman, University of Massachusetts, Boston; Diane E. Goldstein, Memorial University of Newfoundland; Peter J. Krause, University of Connecticut School of Medicine; Howard I. Kushner, Emory University; Lawrence D.
